

What is Fotona4D?

Fotona4D is a series of synergistic, non-invasive laser treatments of both the exterior facial and interior oral cavity, enabling full-thickness contraction of collagen for persistent tightening and volumization without injectables. With two laser wavelengths and 4 treatment modes, anti-aging is comprehensively approached from 4 different levels, working on deeper, medial and superficial connective structures of the skin, as well as targeting imperfections.

The Natural,
Rejuvenating Face Lift
With No Surgery,
No Downtime &
Immediate Results

How It Works

Step One: SmoothLiftin™

A gentle Intraoral heating treatment which stimulates collagen contraction resulting in improved skin tightness.

Step Two: FRAC3®**

The treatment of specific, deeper imperfections to complement the effect of the intraoral treatment, as well as restore youthful texture.

Step Three: PIANO®†

Safe, and rapid external laser tissue heating concentrating on deep energy delivery for an synergistic tightening effect.

Step Four: SupErfacial™††

A light peel which improves the appearance of the skin, and reduces imperfections, giving the skin a pearl finish.

* Mucous tissue resurfacing

** Treatment of pigmented and vascular lesions

† Treatment of wrinkles

†† Skin resurfacing

The Dimensions of 4D

The four "dimensions" of Fotona4D refer to four distinct treatments with Fotona's SP Dynamis system: SmoothLiftin™, FRAC3®, PIANO® and SupErfacial™, all harnessed in concert to combat facial aging, with little or no downtime or anesthesia, and that can be performed all year-round.

How Long will it take to see results?

Results will vary with every individual, but most patients see some immediate results, with the complete result taking place gradually over a time period of 2-3 months, if you elect to have a more aggressive treatment, you may experience a day or two of redness.

What does the procedure feel like?

Everyone is different, but typically there is a gradual warming sensation, and after a few minutes you may experience some very brief hot sensations in the treatment area, which dissipate quickly.

Does the procedure require any downtime?

No, the treatment is non-surgical, and non-invasive allowing patients to walk-in, and walk-out.

As part of our commitment to you, our practice has invested in new **NON**-invasive technology, which maximizes patient comfort. Be sure to ask our staff or the doctor about the latest in skin rejuvenation, **Fotona 4D**.
